

FL3 TriPhase Insertable Electrode

The FL3 is a high-end electrode, made and assembled by a medical device manufacturer following [ISO 13485](#) management systems. The finely electropolished aluminum and Ultem polymer components are designed for biocompatibility and designed to be easily cleaned.

It can even be autoclaved if sterilization is required by professionals.

It was made to provide years of pleasure when properly used and cared for.

Getting Started:

The FL3 is a TriPhase device with three (3) electrode surfaces.

Connections are made via three (3) 4mm banana jacks on the bottom:

- **C** connects to the center electrode
- **B** connects to the base electrode
- **T** connects to the top electrode

Connect the electrodes to the output leads of your power unit as desired:

You can connect 1, 2 or all 3 of the electrodes to achieve a variety of effects.

A [TriPhase Adapter](#) allows you to create a common connection between both output channels and connect all three (3) electrodes of the FL3 at once

Using [Low-Profile Banana Adapters](#) make it easier to wear the FLP while sitting down or wearing clothes or other gear.

You can also use the FL3 as a bipolar probe by connecting (2) electrodes and leaving (1) electrode free. This opens up a variety of stimulation options with the deeper penetration provided by the FL3.

Lubrication:

We recommend using a water-based lubricant for best results. Some hybrid lubes also work well, including Spunk Hybrid Lube.

Avoid pure silicone lubes. Silicone acts as insulator and can interfere with electrical conductivity.

Do not place a condom over the FL3. Rubber is an insulator and prevents electrical conductivity.

Avoid drops, falls, or contact with rough surfaces which may damage to the precision electropolished finish. If finish becomes rough, worn or sharp, we recommend discontinuing use of the device.

Cleaning:

This electrode is easily cleaned using mild detergents. Dawn® and other dish detergents work well. **Avoid caustic cleaners.** They can cause damage to the polished aluminum finish. Rinse well and dry with a soft, clean towel before storing between uses.

Storage:

Store the FL3 in its box or in a cool, dry place between uses.

The FL3 is not representative of or intended to be used as a medical device.
